TECH + BALL

Dashawn Bledsoe

Presented by Dashawn Bledsoe

The Challenge

We are tackling a way to draft athletes faster with a special ultra-thin sonic 3D fingerprint sensor on our biometric technology ball. This will help with tracking and measuring data as well as user discovery focusing on poverty, low-income, and middle-income spaces. People who aren't able to afford a college, don't have a scholarship, and athletes that don't have sports agency capital will be able to be discovered quickly for professional league club recruiting. We will also be solving the wealth gap issue by offering fractional stake options at NIBLS live spectator events as tickets for seasons, playoffs, concerts, festivals, and conferences. We also are preventing the generational cycle of poverty with paid trainings using our technology ball for prospective activist athletes that want a career in our independent professional sports club genre tech+ball .

NIBLS COIN
USA TECH + BALL

Service & Product Solution

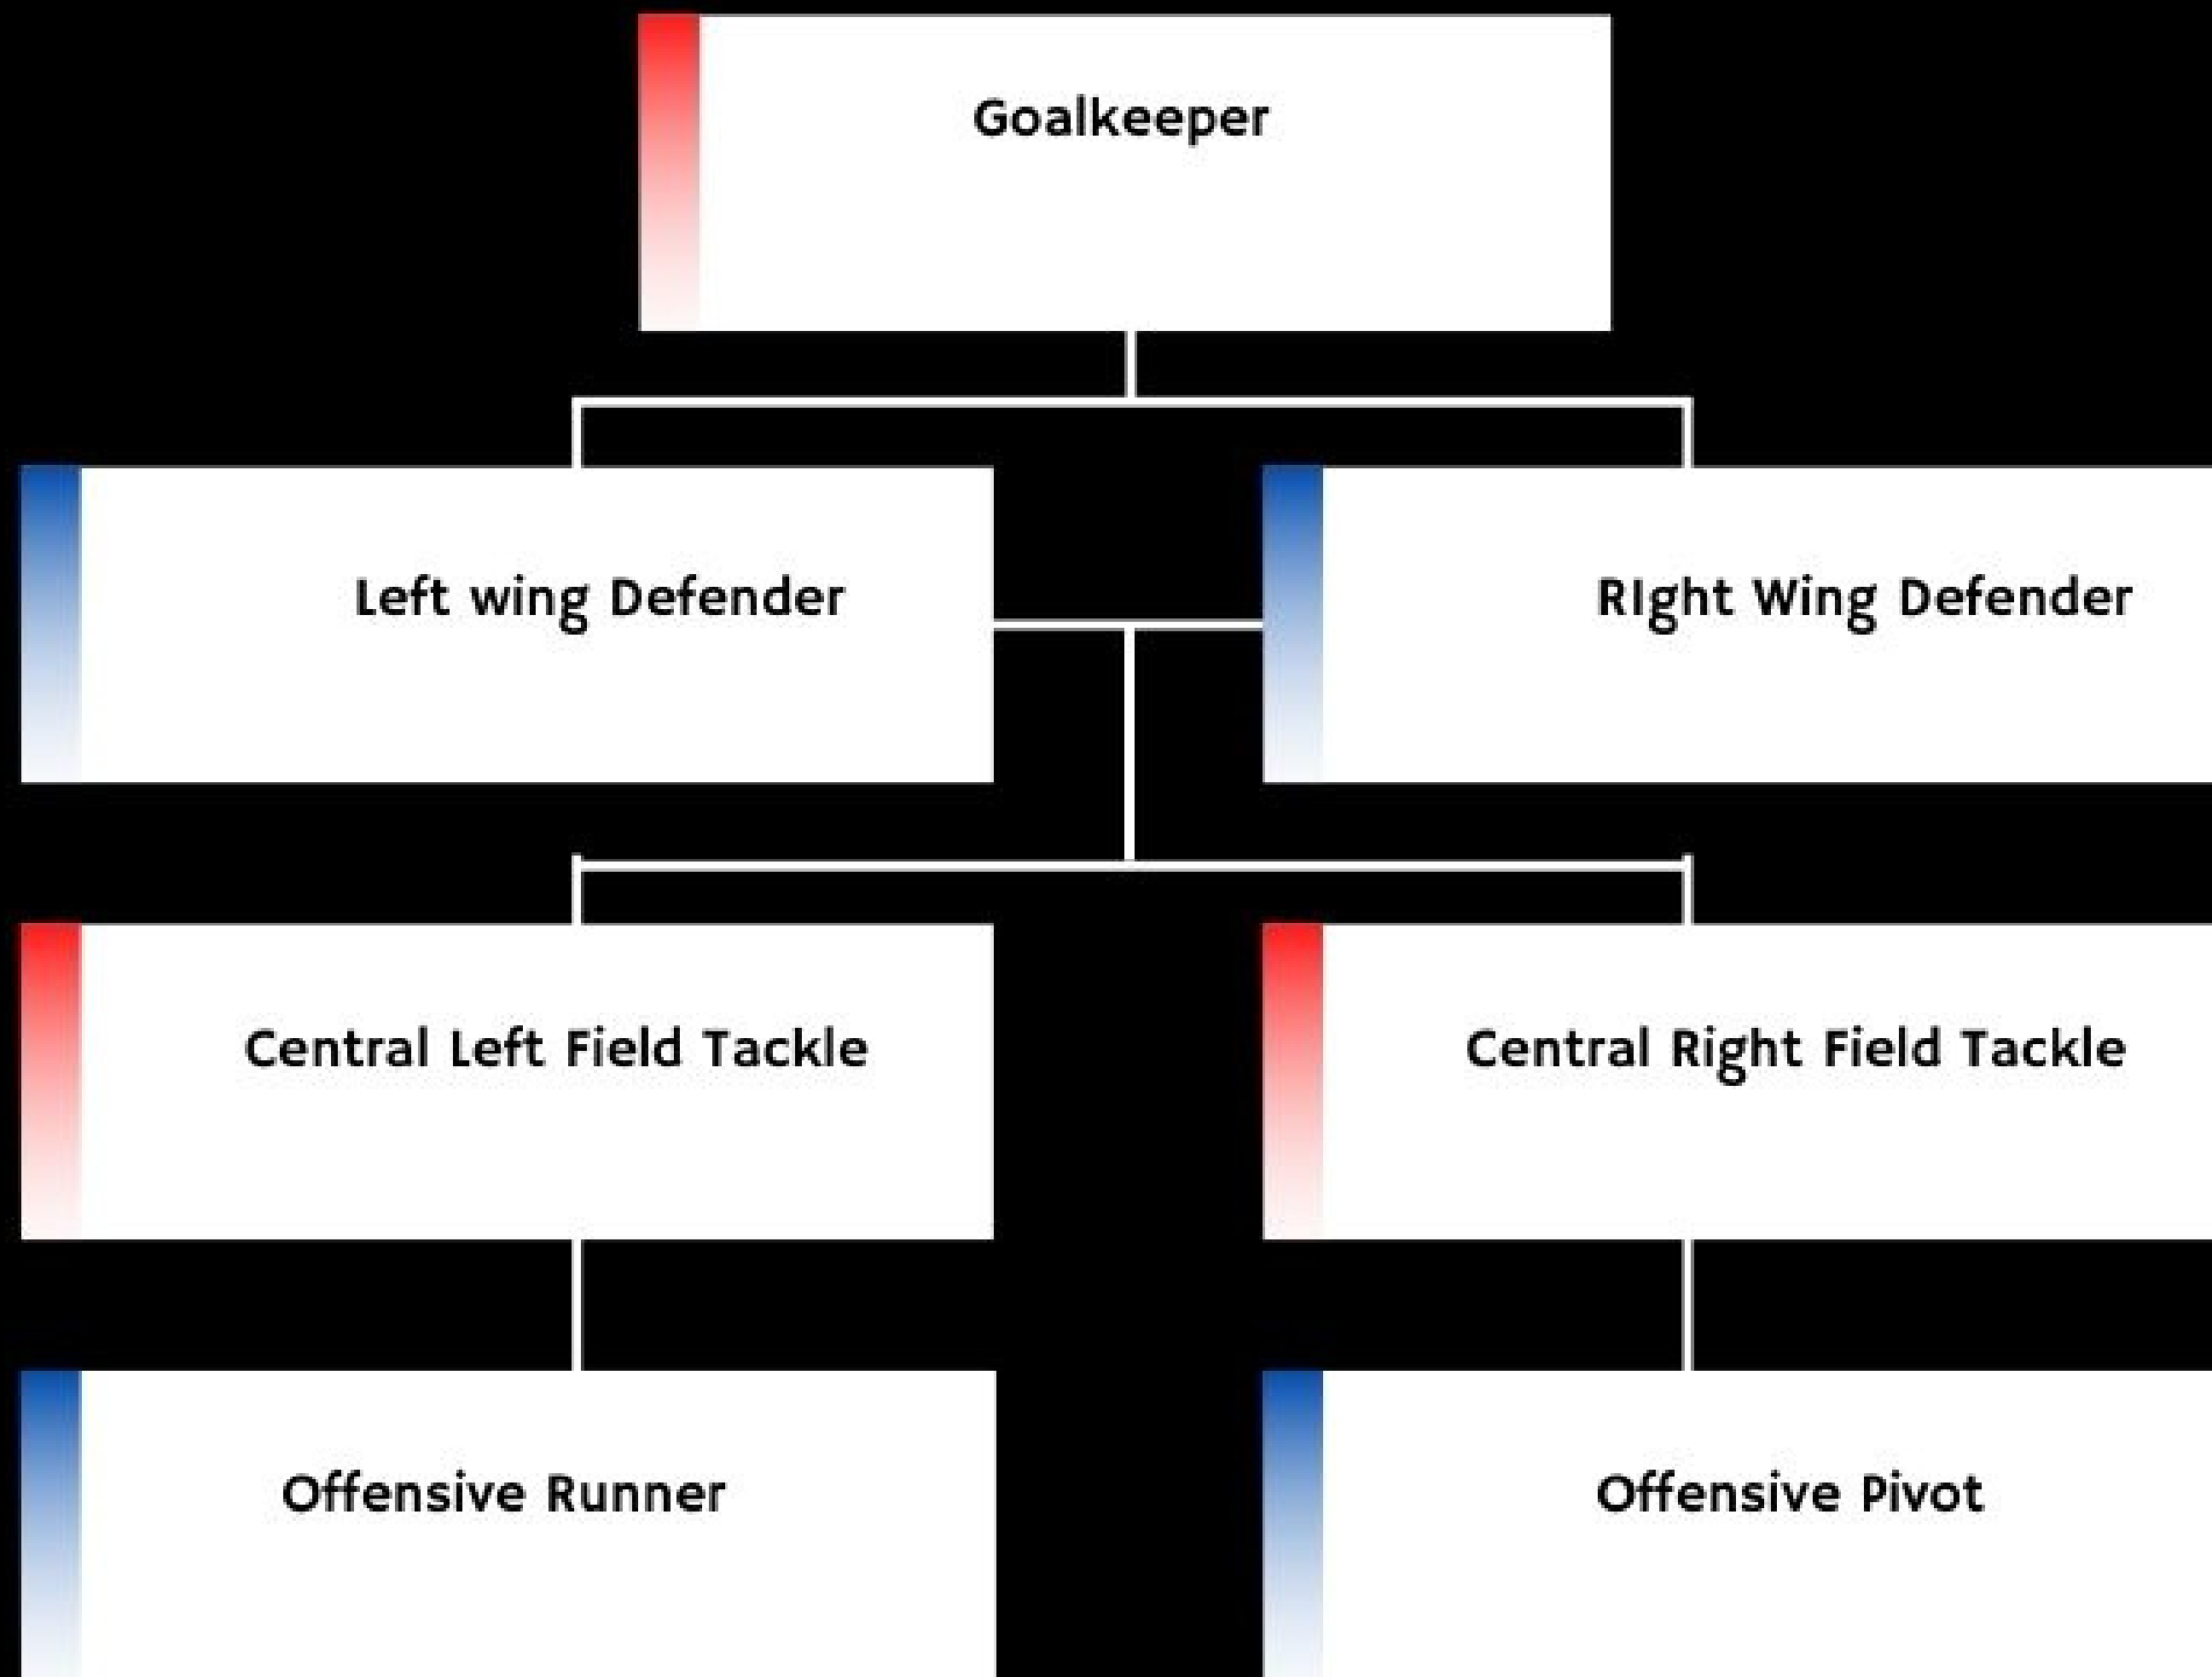

NIBLS (sports genre tech+ball) has Manu-tech hardware that is designed with a ultra thin sonic 3D fingerprint sensor that covers our technology ball outer layer to collect specific data analysis like user identity in real-time. Sensor's inside the ball track and measure ball speeds, power, distance, passes and catches. Our scores will be tracked with a motion sensor device when goals in are made real time. We have other traditional sports like American Football, Rugby, and Team Handball that will be able to use our same Invention in sports technology for fitness & training's.

Tech+Ball is a independent sports club genre that uses biometric cloud data from club official game ball with the featured device that connects with A Tokenized blockchain trading platform offering ticket stakes and optional fractional stake of major athletic contracts using a buyback ROI strategy.

This lets activist fans get payouts based on athletic training investment option for our next draft professional's.

About Invented Sports Genre Tech+Ball & How to Play

7 players on each team play away or home for sports challenges. The object or mission of the game is to score a goal by passing the ball by the goalkeeper for 6 points (listed in the diagram demo on website and business plan above), or running the ball pass the goal line into the goal area for 3 or 2 points. If the athlete is able to fight for space for a six-point play in the goal area without the goalkeeper tackling to stop the play for the 6 points for the score will be recorded if the tech+ball goes through the Net. If offensive athlete gets stopped at 2- or 3-point lines then the athlete will proceed with that recorded score. If A goalkeeper tackles offensive athlete in the 2- or 3-point area and the offensive athlete is removed out of the goal area, then the play doesn't count for any points. Each attribute collected with the technology ball represents a stake fractional ownership increase or appreciation in the network in example successful six-point scores represent an extra full token, successful long-distance passes and catches represent full tokens, then speed and power measured and tracked above normal represent fractional increases on the blockchain network. Teams can depreciate other teams on the network based on midair steals giving defending team ALT team token a half token increase depreciating offensive team ALT team token appreciation in realtime. For regular professional seasons NIBLS will have fifty games, twenty-five home and twenty-five road games each individual team. The club has 1,100 games scheduled in total. During playoff's Western conference teams and Eastern conference play 3-7 format tournament meaning best of 3 each match will lead to semifinals based on performance skills or tech+ball data tracks and measurements, the best out of 7 in the finals-based on scores and tracking measurements. 8 of the best records out of the season league clubs will be instructed at playoffs.

Online Payment

Tokenized PCI API / Data Mining

Application Implementation

Blockchain has three intelligent portfolio investment options

- 1) Festivals, concerts, & conference tickets management
- 2) Fitness training portfolio for individual athlete's
- 3) Season's/playoff's ticketing portfolio management option.

NIBLS Coin Tokenized API Implementation

- NIBLS Coin is a value token fractional share of NIBLS organization.
- NIBLS Hardware (Tech+Ball) & IoT Device's stream public cloud data to API to A Private Link Endpoint.
- Data from the public cloud is migrated to an integration of encryption in memory generation that is a unique encryption.
 - PCI Is implemented with Azure AD B2C.
- SDK will read/write values query events for sports technology data collected & users that buy event membership stake offering.
- Each Data set has values that represent worth or is commodity of appreciation or increase and a depreciation of commodity value.
 - Data sets from IoT Hub represent the commodity or worth of the token.
 - Each data set in real-time migrated to API is analysis of measured and tracked performance data analytics.
 - Represents three different rest Api's on Hyperledger fabric.
 - NIBLS engaged customer use of NIBLS API is recognized by A Members purchase.
 - Our Digital Token platform is A DeFI with three different Intelligent Portfolio Finance solutions.
- As Explained above our Tokens recorded as valued commodities of data integrated for purchase as stake token also governed as gate receipts tickets for tech+ball seasons and playoffs.
 - Individual Athletic Training Performance Data sets act as the same values as tournament challenges Values.
- stake offerings for club members are offered on a rest Api in Hyperledger fabric, a tokenized value of NIBLS Coin on blockchain representing gate receipt tickets to our concerts, festivals, and conferences. This encrypted digital token is data movement of verification of purchase only in the network

PRIVATE CLIENT

1 Portfolio Consultant

Analysis and guidance.

2 Dedicated sports team support

Support by entire team of professionals and favorite sports team.

3 Associate Portfolio Consultant

Answer questions and handle day to day service request including performance reporting, trading, and more.

4 Ongoing wealth Management

- Regular team collaboration ensures your portfolio aligns with your goals and approved strategies put in place, a diversified portfolio is put is constructed. Teams help chose asset game outcomes during seasons and playoffs.

- Sports stats meetings, quarter performance reports, monthly statement of portfolio activity. You can use sports team recommendations and rationale to help you final investing decisions.

BENEFITS

PROFESSIONAL GUIDANCE

Recieve professional guidance to build a sports league investment portfolio

- 1 Fast Computed Trades
- 2 No commissions
- 3 Transparency
- 4 No Advisory Fee

Hands-Free Investing

Investment Management

Throughout the year adjustments to our app portfolios are made as we monitor to keep it diversified. Keeping Activist fans updated we provide detailed performance reports and email updates from Application PR management teams.

Tax-Loss harvesting can be handled

24/7 access to your account

24/7 access to investment professionals

Quick and easy enrollment

Competition

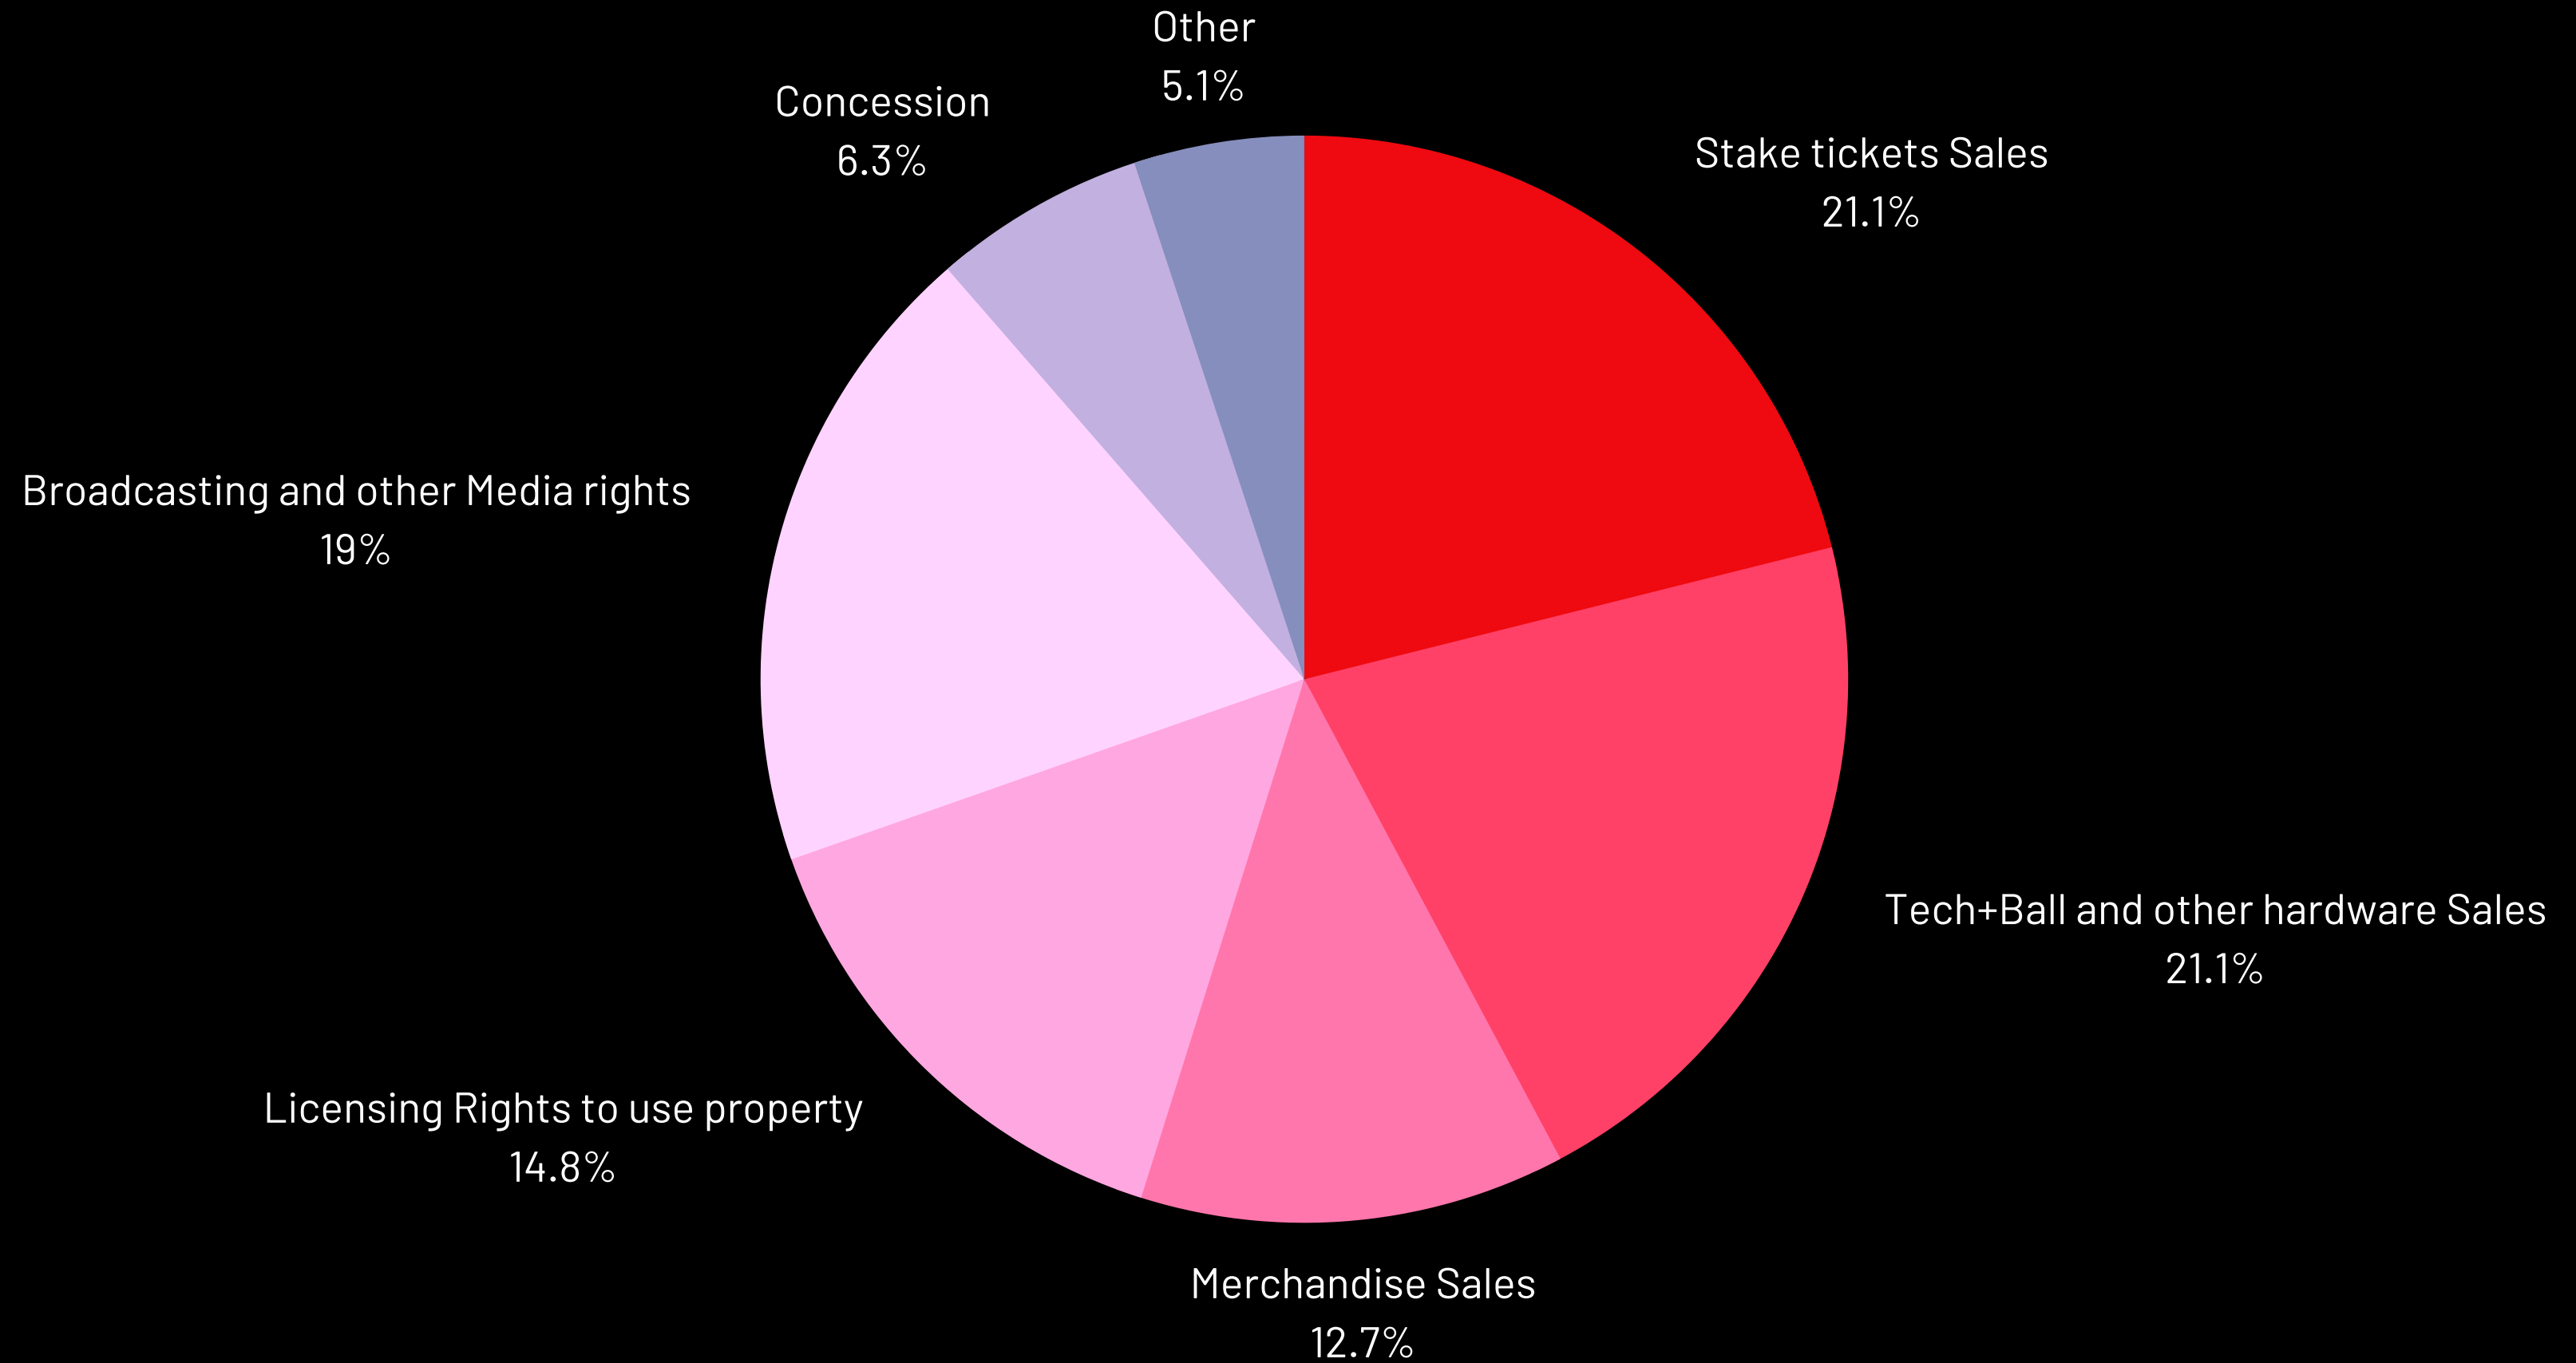

Whats available now?

- NFL is offering media right shares to media viewers in cryptocurrency & offering salaries in bitcoin.
- NBA Team Sacramento Kings is accepting bitcoin and using Ethereum to fundraise for scholarships
- MLS is doing NFT's
- Dribble up - Designs smart sports biometric fitness equipment for Boxing, Basketball, and Soccer.

what is their status

- National Football League is a major partner with blockchain.com
- NBA team Sacramento Kings is own by Vivek Ranadive and the currently are the only team offer scholarships using Ethereum mining at their arena.
- MLS are still creating non fungible coin that represent Art of athlete players and teams
- Dribble up is a health and fitness company solving skill development for football, basketball, and boxing that connect to a application that records the moves of a player

Market Analysis

Business Model

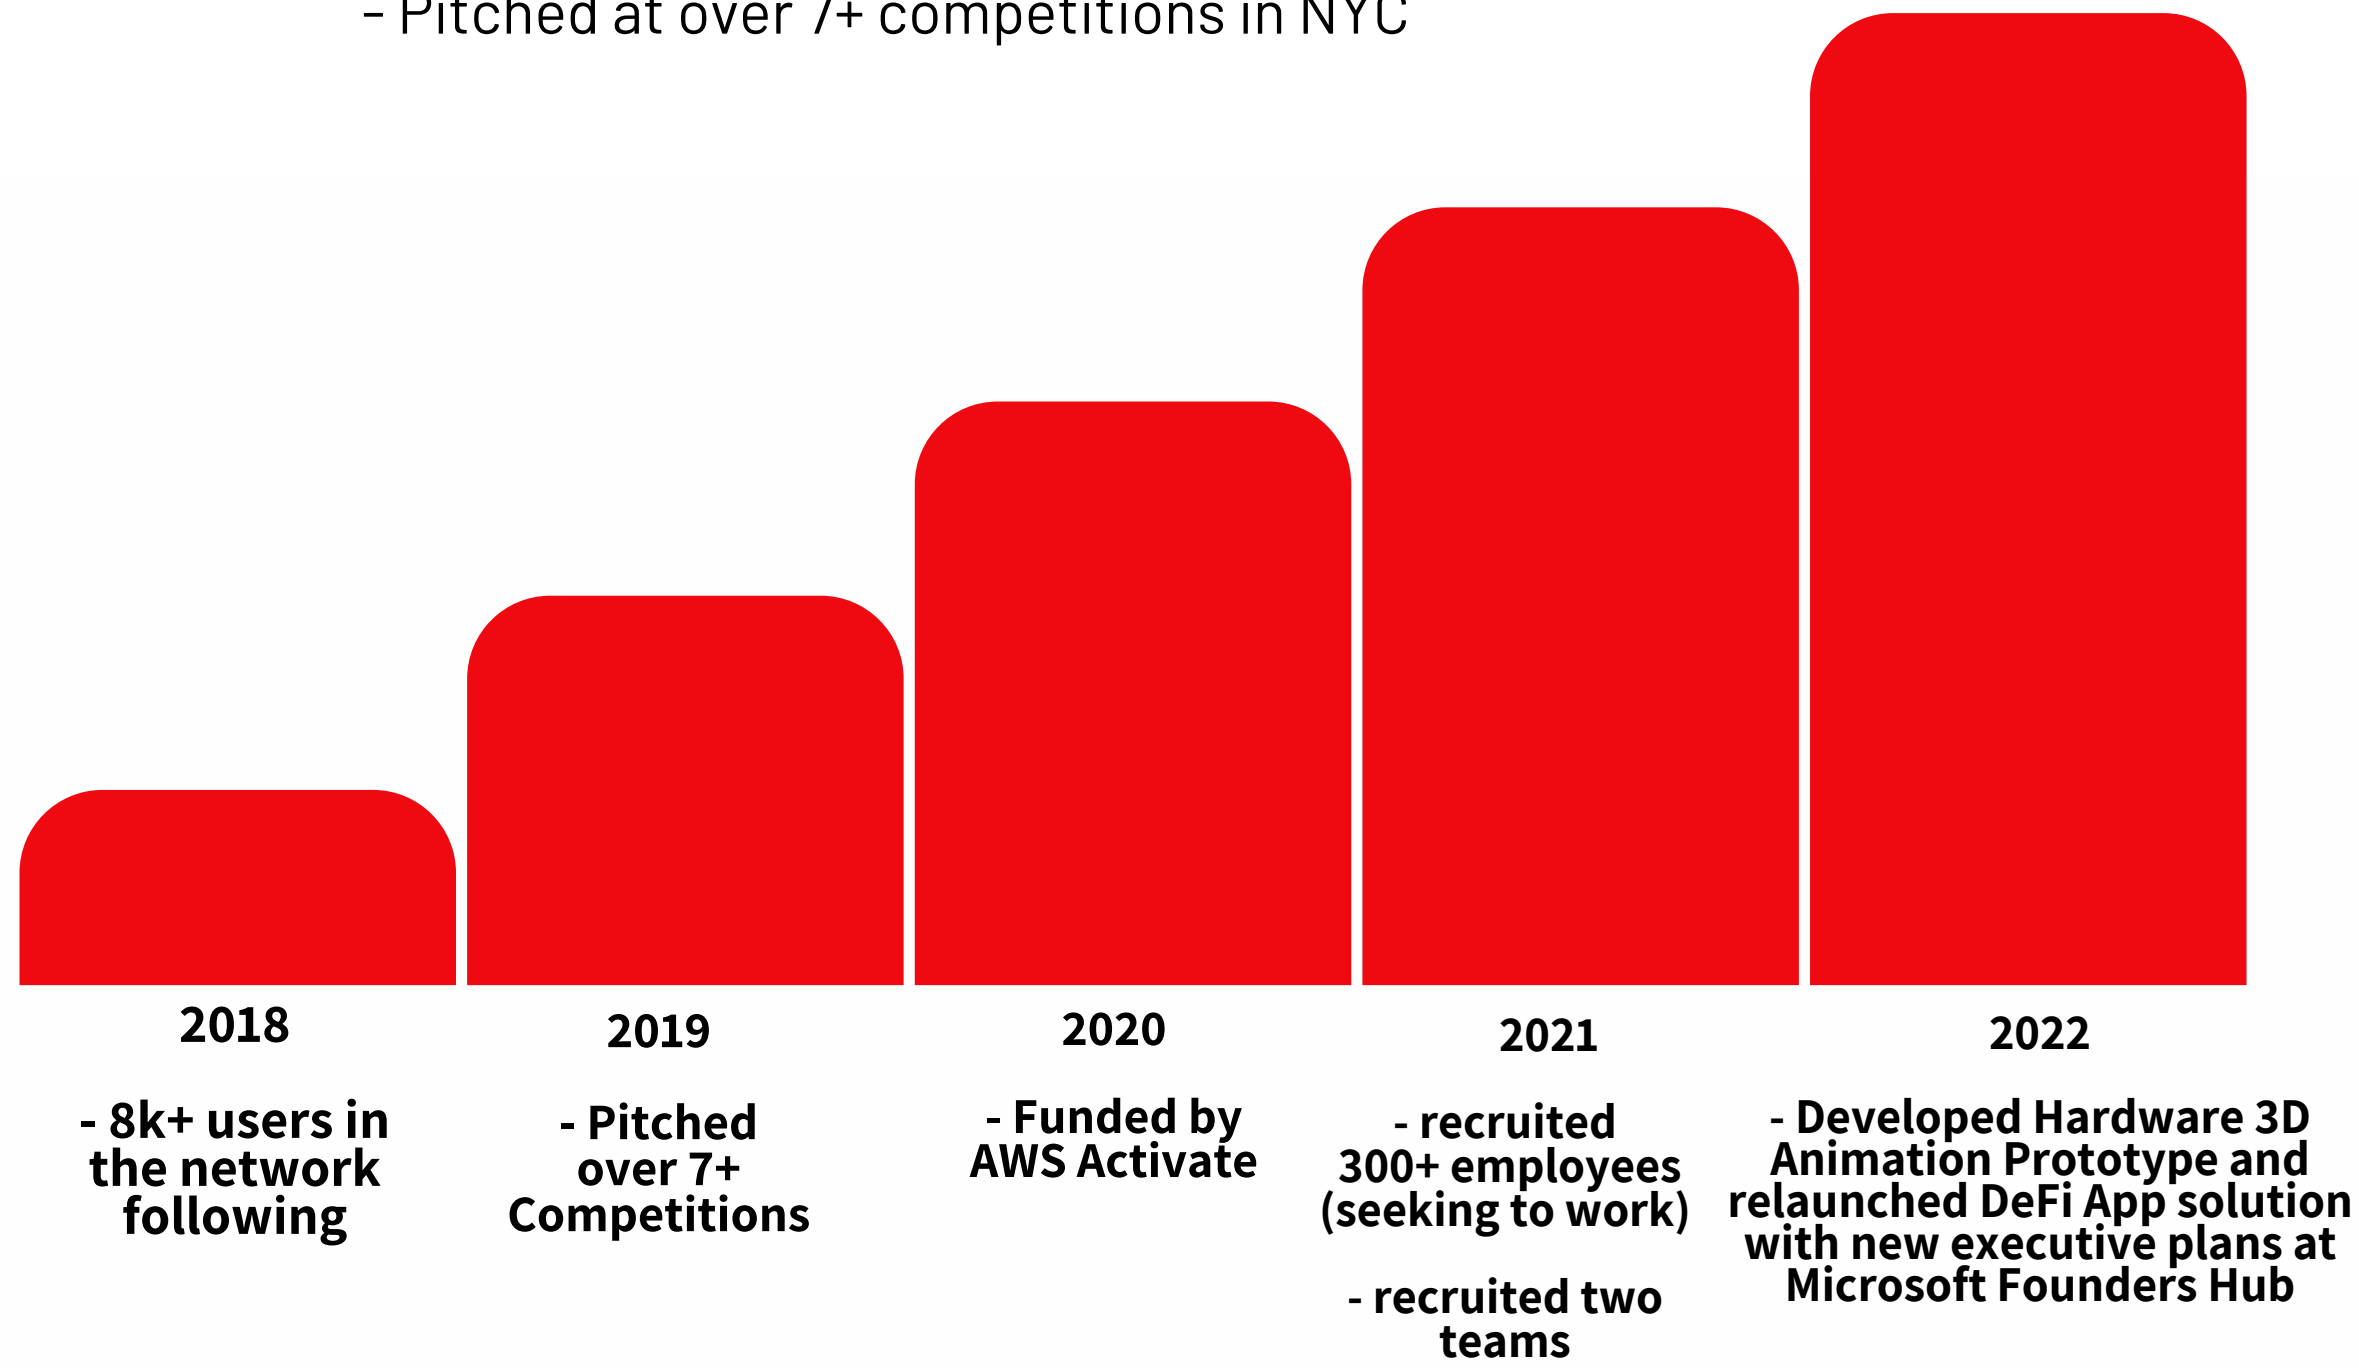

- Athletes Subscribe to our hardware technology (tech+ball)
- Paid to train
- Weekly Wi-Fi/ball data service fee starting at \$50
- Licensing
- Tickets holders are trading users
- Live media broadcastings
- Live event spectators

How To Make Money

- Buy NIBLS Hardware tech+ball for \$250 - \$350
 - Become a Tech+Ball athlete streamer of cloud data collection then mine data on blockchain
- NIBLS hardware / Motion sensor goal device
- NIBLS Hardware/ Heartrate monitor EWallet
- Become a NIBLS Coin blockchain trader/club member (club token/ticket shareholder)

Company Traction

- AWS activate program credits were issued to develop our api
- Social media traction of 8K+ users in the network
- Developed the hardware 3D Animation prototype & relaunched DeFi prototype finance solution with Microsoft
- 300+ employee waiting to work for NIBLS
- Two sports teams preparing to play "tech+ball" sports challenges
- Spoken at Speaker events about the NIBLS Coin Project startup
- Pitched at over 7+ competitions in NYC

Investment Needed

Seeking

\$1,248,868.00

Asking

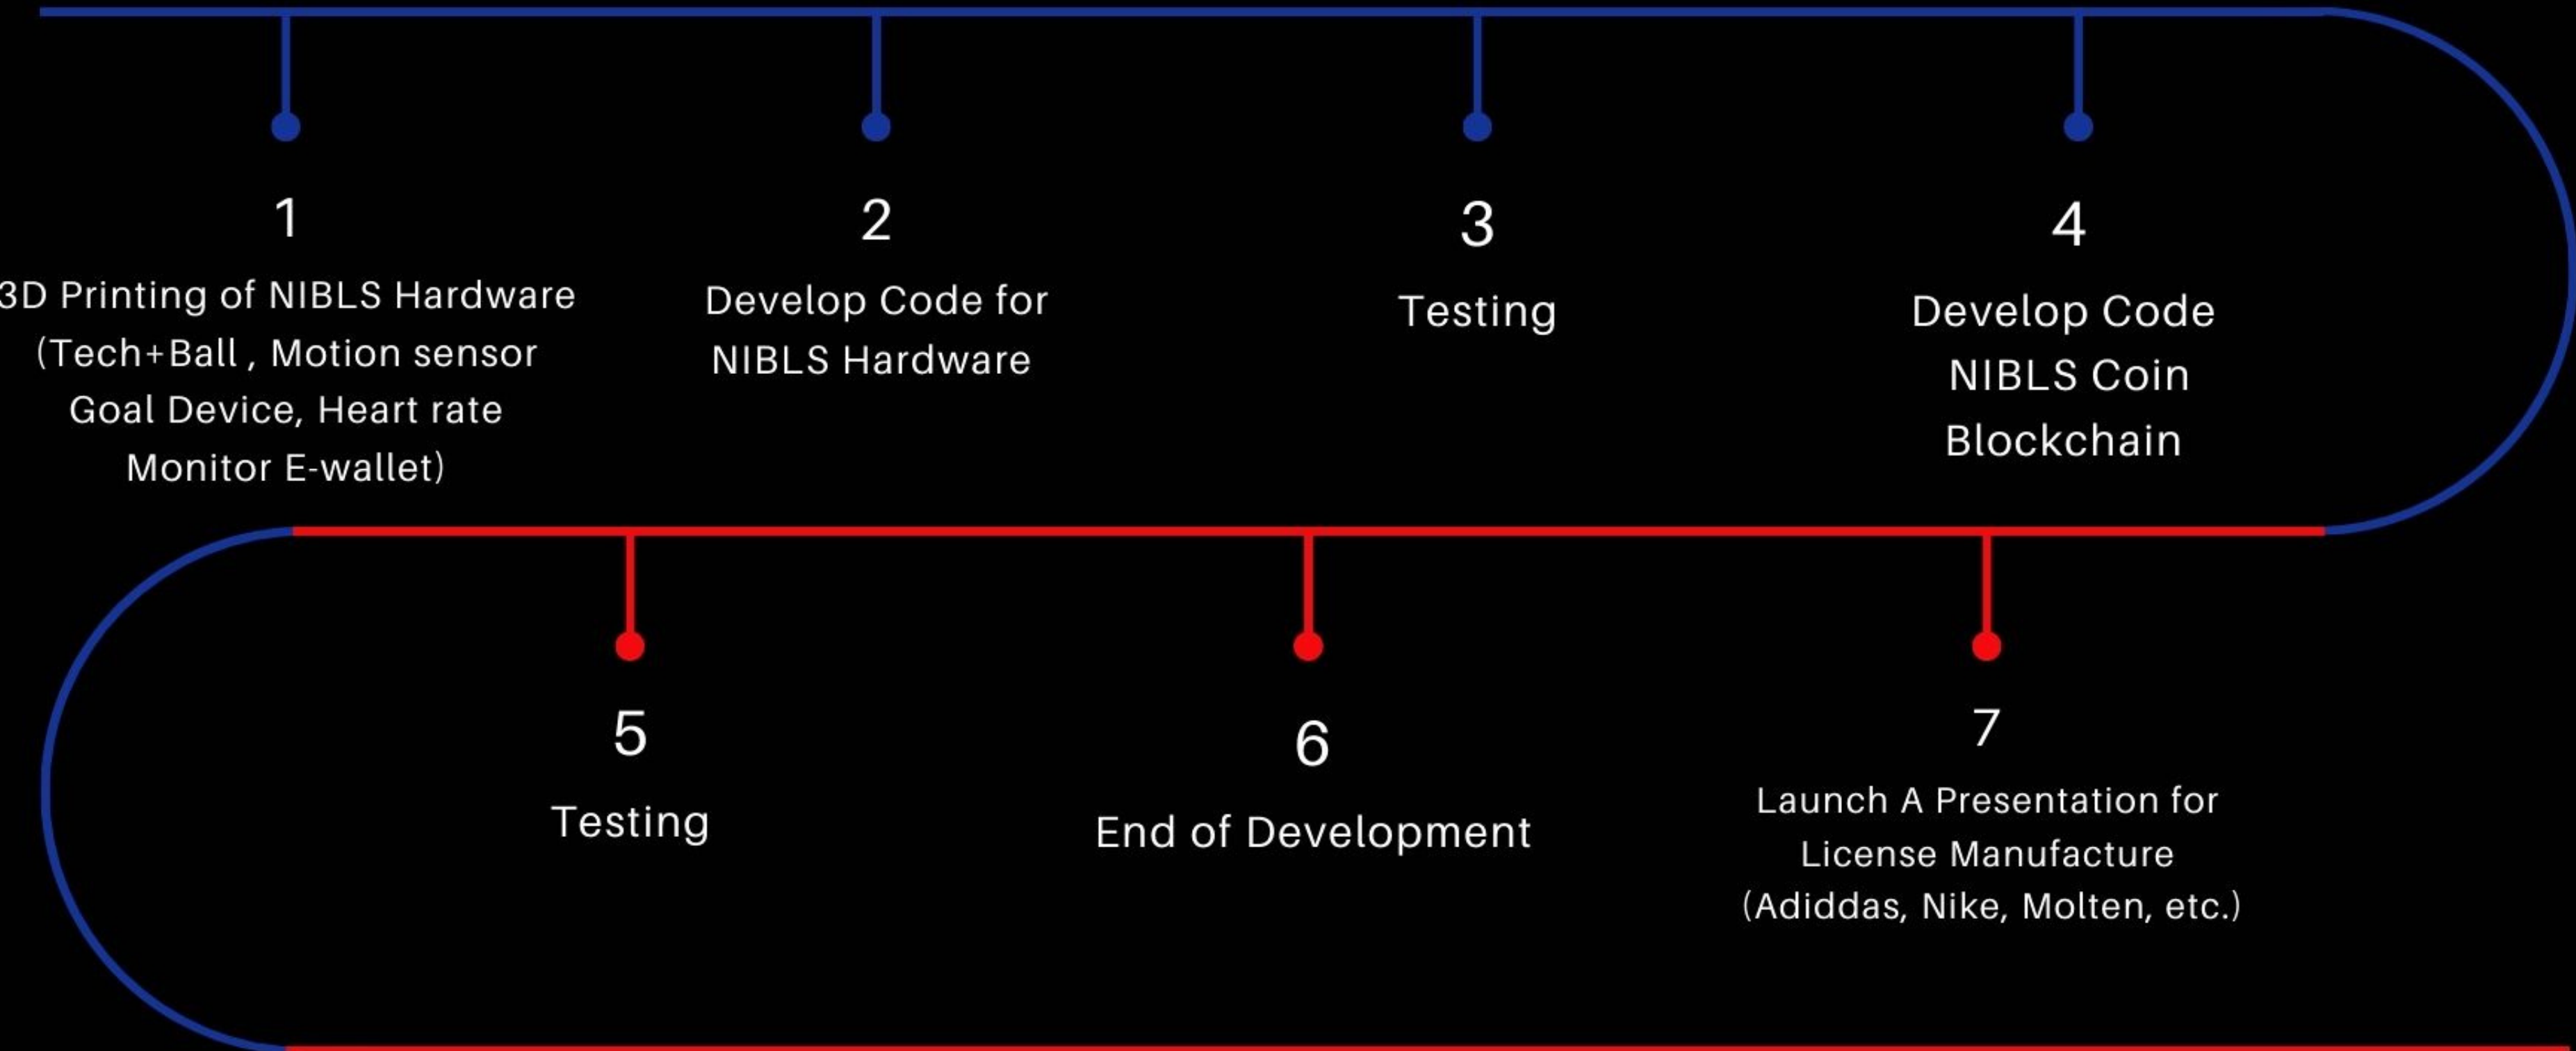

\$250,000.00 for 20%+

Equity

What will we invest in?

- Based on the design process we will concept NIBLS accelerator programs with middle school's & high schools.
- Build A pipeline accelerator of new tournaments with a focus on national and international middle income, low income, and poverty main areas.
 - Practice sports management activities daily with academic training at labs & camps.
- Build a pipeline of academic institutes with a focus on NIBLS risk management, data mining, data science, data analysis, sports management, sports business, physical athletic development, gaming, media and broadcasting programs.
- Using training data and sports challenge data we will research and develop philosophies of investment management (Risk Management) .
 - Accelerate access to early growth-stage capital through ancillary fundraiser event driven campaigns.
 - Model NIBLS Stadiums or Arenas and lab facilities using CAD or Solidworks design technology to implement venture innovation to private equity.
- Continue research and develop of new updated design innovation for hardware product improvement based on technology reliability, data latency, identity discovery, and security.
- Identify then seek businesses partners that will volunteer to patent and build out newly improved Manu-tech as a license manufacture.
- Hire brand influencers and celebrity influencers to promote fashion, clubs, technology, tokens, & live events.
 - Seek and secure partnership, sponsors, and endorsements from finance and the sports industries.
 - ESPN New York Radio Ad Campaigns, Hot 97.1, Power 105.1, Z100 (Events & music single promos building up royalties through streaming currently listed "Top of The League" by Dashawn Bledsoe on streaming platforms to make revenue

About Our Founder

Dashawn Bledsoe has attended Columbia University for Sports industry essentials to practice event management in sports. Then attending University of Geneva for Investment Management recently learning philosophies of investing, strategies, and terms from finance. Dashawn has been in business for 4 years and 6 months with this project doing all the hardship of developing business solutions, legal drafting, angel meetings, recruiting, & inventing. In year 2020 we were funded by AWS Activate program for our solution but no luck finding a Developer and credits expired. Recently designing new architecture with Azure with our first 3D animated prototype we were funded by Microsoft startups for up to \$150K to start migration from AWS solutions to Azure Microsoft. Dashawn has been still seeking out A Technical Cofounder and seed funding for our blockchain hardware at NIBLS.
